# Al Jubail

- **Jubail** is an industrial city located in the Eastern province of [Saudi Arabia](#).
- The city covers 1,016 square kilometres and includes industrial complexes as well as major harbour and port facilities. It accounts for about 7 percent of Saudi Arabia's GDP.
- Jubail has the largest Independent Water and Power Project (IWPP) in the world which produces 800,000,000 liters of water and 2743.6 megawatts of electricity per day.
- Jubail was designated as a site for a new industrial city by the Saudi Arabian government in 1975.
- Currently, Jubail Industrial City is the world's largest civil engineering project.
- Jubail is made up of the old town of Al Jubail also known as the Jubail Balad, which dates back to the 18th and 19th centuries and had started as a small fishing village until 1975 when the new industrial area was established.

An industrial park/areas is a **designated area** or **zone** where various industrial activities and businesses are concentrated. These parks are typically developed and managed by public or private entities to promote industrial development and economic growth.

It is a portion of the city that are specifically reserved for industrial use rather than for residential or commercial purposes.

# Some key features of Industrial Parks

1. **Location:** Industrial areas are typically located outside or on the edges of the central residential area of the city.

Typically, these places have access to transportation which includes road and rail.

**2. Infrastructure:** They are equipped with essential infrastructure such as roads, utilities (electricity, water, sewage), telecommunications, and sometimes rail connections.

**3. Facilities:** Industrial parks may offer shared facilities like warehouses, storage yards, loading docks, and office spaces for administrative purposes.

**4. Security:** They often have security measures in place to ensure the safety of businesses and assets within the park.
